***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 21-24, and 26-27, are rejected under 35 U.S.C. 102(e) as being anticipated by Jones et al (P.N. 5,587,928).

Jones et al discloses a video apparatus that shows all the limitations recited in claims 21-22, including the feature analyzing an audio or video signal having a size and producing a representative signal and corresponding to the audio or video signal that identifies the audio or video signal but has less information than the audio or video signal and is smaller in size than the size of the audio or video signal (See Jones et al's Figure 3, components 321, 319), the feature of transmitting to a remote location the representative signal (See the transmission means and the telephone shown in Jones et al's Figure 3), and the feature of recreating the audio or the video signal at the remote location as specified in the present claims 21, and 22). (See Jones et al's column 5, lines 61-64).

With regard to claim 23, the feature of the memory mechanism recited thereof is present in Jones et al. (See Jones et al's Figure 7, component 703, and also one of

ordinary skill in the art would readily recognize that the compression means shown in Jones et al's Figure 3, component 319, would necessarily include a memory).

With regard to claims 24, and 27, the feature of recreating means including means for playing the representative signal recited thereof is present in Jones et al. (See the telephone which includes the capability of displaying the transmitted video signal shown in Jones et al's Figure 3, and further, see Jones et al's column 5, lines 61-64).

With regard to claim 26, the feature of converting the audio or video signal into a digital signal as specified thereof is present in Jones et al. (See the compression means shown in Jones et al's Figure 3, component 319).

3. Claim 25 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
